Bachelor in Artificial Intelligence - Specialization in Artificial Intelligence and Cyber Security

Program Code	29037	Degree	Bachelor's
Department	Artificial Intelligence Department	Faculty	Faculty of Artificial Intelligence and Data Science
Campus	Ramallah Campus Jenin Campus	Duration	4 Years
Credit Hour Fees	Start from 250 ILS	Teaching Language	English
Semesters	First Semester Second Semester Summer Semester	Study style	In-Person
Status	Admission Available		

Overview

The Bachelor of Science in AI and Cybersecurity is designed to address the increasingly interconnected fields of artificial intelligence (AI) and cybersecurity. As digital threats become more sophisticated and dangerous, the integration of AI into cybersecurity strategies offers unparalleled potential for developing advanced, adaptive defense mechanisms. This program aims to equip students with the foundations in both the theoretical and practical applications of AI and cybersecurity, ensuring they understand how to utilize AI to enhance security protocols, detect and threats, and ensure data integrity and privacy across various digital platforms.

2nd : Bachelor in Artificial Intelligence - Specialization in Artificial Intelligence and Education Technology

Bachelor in Artificial Intelligence - Specialization in Artificial Intelligence and Education Technology

Program Code	29111	Degree	Bachelor's
Department	Artificial Intelligence Department	Faculty	Faculty of Artificial Intelligence and Data Science
Campus	Ramallah Campus Jenin Campus	Duration	4 Years
Credit Hour Fees	Start from 250 ILS	Teaching Language	English
Semesters	First Semester Second Semester Summer Semester	Study style	In-Person

Overview

The Bachelor of Science in AI and Education Technology is an interdisciplinary program designed to equip students with a comprehensive understanding of artificial intelligence (AI), educational theory, and the integration of technology in educational settings. This program blends core principles of AI, such as machine learning, natural language processing, and data analytics, with foundational educational theories and instructional design strategies. By intertwining these disciplines, the program aims to foster a new generation of educators, technologists, and innovators who can leverage AI to enhance learning experiences, address educational challenges, and contribute to the advancement of digital learning environments.

3rd : Bachelor in Artificial Intelligence - Specialization in Artificial Intelligence and Innovation

Bachelor in Artificial Intelligence - Specialization in Artificial Intelligence and Innovation

Program Code	29112	Degree	Bachelor's
Department	Artificial Intelligence Department	Faculty	Faculty of Artificial Intelligence and Data Science
Campus	Ramallah Campus Jenin Campus	Duration	4 Years
Credit Hour Fees	Start from 250 ILS	Teaching Language	English
Semesters	First Semester Second Semester Summer Semester	Study style	In-Person

Overview

This interdisciplinary program combines a strong foundational understanding of computer science with specialized knowledge in AI, machine learning, robotics, and digital transformation, preparing students to drive and manage technological advancements. Through courses like "Technology Entrepreneurship," "Digital Transformation," and "Software Engineering," the program emphasizes not only the technical aspects but also the strategic and ethical considerations of implementing AI technologies in various sectors.

With a curriculum that spans from fundamental topics such as "Data Structures and Algorithms" and "Computer Architecture" to cutting-edge areas like "Deep Learning," "AI in Healthcare," and "Cognitive Systems," students will be equipped to tackle complex challenges and opportunities in the industry. The program includes hands-on projects, collaborative workshops, and a capstone project that collectively foster a practical understanding of how to design, analyze, and implement AI systems effectively.

4th : Bachelor in Artificial Intelligence - Specialization in Artificial Intelligence and Public

Relations

Bachelor in Artificial Intelligence - Specialization in Artificial Intelligence and Public Relations			
Program Code	29038	Degree	Bachelor's
Department	Artificial Intelligence Department	Faculty	Faculty of Artificial Intelligence and Data Science
Campus	Ramallah Campus Jenin Campus	Duration	4 Years
Credit Hour Fees	Start from 250 ILS	Teaching Language	English
Semesters	First Semester Second Semester Summer Semester	Study style	In-Person

Overview

The Bachelor of Science program in AI and its Application in PR is designed to apply the advances of artificial intelligence to the field of Public Relations. This interdisciplinary program aims to equip students with a good understanding of AI technologies, such as machine learning, natural language processing, and data analytics, and their practical applications in building effective PR strategies, managing media relations, and engaging with diverse audiences. By integrating AI into traditional PR frameworks, the program prepares students to lead in a digital landscape where AI-driven insights and strategies can significantly enhance the impact and efficiency of PR .

Overview

The Bachelor of Data Science and Machine Learning is an innovative and interdisciplinary program designed to prepare students for the rapidly evolving fields of data science, artificial intelligence, and machine learning. This program combines rigorous training in mathematics, statistics, computer science, and specialized machine learning algorithms to provide students with a comprehensive understanding of the principles and practices underlying the analysis, interpretation, and management of large data sets. Throughout the program, students engage with real-world data sets and projects, developing skills in data preprocessing, visualization, statistical inference, predictive modeling, and algorithmic design. The curriculum is structured to not only impart technical proficiency in programming

languages such as Python and R and tools like Tensor Flow and PyTorch but also to foster critical thinking, problem-solving, and ethical considerations in data science practices. Graduates of this program are well-equipped to tackle complex data-driven challenges and contribute to innovations across a wide range of industries, including technology, finance, healthcare, and beyond, positioning them at the forefront of the digital economy.

Overview

Due to the huge data revolution that the world is witnessing, the specialty of statistics and data analysis has become one of the most sought-after disciplines in the world. Hence, there is a great need in the Palestinian market for specialists who are able to deal with data and to be able to analyze and interpret them in an effective way in order to make the necessary decisions to advice their clients.

The bachelor`s degree of Statistics and Data Analysis at the Faculty of Sciences at the Arab American University is a joint program in corporation with the Palestinian Central Bureau of Statistics. The cooperation is based on the needs of society for statisticians who have

practical skills in statistics and data analysis to serve in governmental and private institutions. Both institutions have placed great importance on developing skills to understand modern information and they have orientated towards modern disciplines in order to keep up with current rapid developments. It was agreed upon by the bureau and the university that they must work together in order to produce the statisticians needed desperately to help the community. The program is expected to provide a solid foundation and practical skills needed in both Statistics and Data Analysis. This program is considered a qualitative addition to the programs offered by the Faculty of Sciences and is the first of its kind in the West Bank.

Bachelor in Virtual Reality Science

Program Code	29012	Degree	Bachelor's
Department	Data Science Department	Faculty	Faculty of Artificial Intelligence and Data Science
Campus	Ramallah Campus Jenin Campus	Duration	4 Years
Credit Hour Fees	Start from 350 ILS	Teaching Language	English
Semesters	First Semester Second Semester Summer Semester	Study style	In-Person
Status	Admission Available		

Overview

The bachelor of virtual reality science provides students with a deep understanding of theories in topics related to Virtual Reality (VR) and the technological devices used to create an interactive environment that does not really exist on the ground, using virtual and augmented reality glasses, with a number of consoles that help in interaction with this virtual environment. The program also focuses on providing students with theories and skills used in the areas of Augmented Reality (AR) and Mixed Reality (MR). It also provides students with the required learning and design experiences, techniques, tools, technologies, and programming skills employed in designing and producing semi-immersive and immersive media content, including the applications of VR and AR, games, simulations, and stories. The program also focuses on user interface (UI) design, user experience (UX) research design, modelling and animation, produce interactive digital contents, design and create 3D models, produce VR/AR applications for social media, produce dynamics soundscapes, and finally create virtual worlds using the mentioned production tools. Special emphasis will be focused on the use of programming aspect of VR and how the artificial intelligence and machine learning methods can be utilized in the field of AR/VR.

Overview

The B.Sc. program in "AI and Digital Media" is designed to merge the fields of artificial intelligence (AI) with digital media, preparing students for the rapidly evolving landscape of digital content creation, distribution, and analysis. This program offers a comprehensive curriculum that covers the fundamentals of AI, machine learning, computer vision, and natural language processing, alongside core principles of digital media, including graphic design, digital storytelling, and multimedia production. By integrating AI technologies with digital media, the program aims to cultivate forward-thinking professionals capable of utilizing AI to enhance creativity, personalize content, automate production processes, and analyze user engagement across various digital platforms.

Students in the program will engage in hands-on projects and collaborative workshops that simulate real-world scenarios, such as developing AI-driven recommendation systems for digital platforms, creating interactive and immersive media content, and employing data analytics to understand and predict media consumption patterns. The program emphasizes not only technical proficiency but also ethical considerations, critical thinking, and the societal impact of AI and digital media. Graduates will emerge as versatile professionals equipped with the skills to innovate in the digital media industry, drive the development of intelligent media solutions, and navigate the ethical and cultural implications of AI in media.

Overview

The B.Sc. program in "Artificial Intelligence and Financial Technology (FinTech)" is designed to equip students with a cutting-edge blend of knowledge and skills at the intersection of AI and financial services. This program addresses the growing demand for tech professionals who can understand the complexities of modern financial markets, using the power of artificial intelligence to drive financial innovation. Students will learn computer science principles, AI and machine learning techniques, and fundamental financial theories, all while gaining hands-on experience with the technologies shaping the future of finance, such as blockchain, digital payments, and algorithmic trading.

As FinTech continues to disrupt traditional financial services with more accessible, efficient, and personalized solutions, this program emphasizes not only technical proficiency but also ethical considerations, regulatory compliance, and entrepreneurial thinking.

Status	Admission Available		

Overview

The Bachelor of Science in Artificial Intelligence and its Applications in Medical Science is designed to bridge the gap between artificial intelligence technologies and the evolving needs of the healthcare i. This interdisciplinary program combines the study of AI principles, machine learning algorithms, and data analytics with medical sciences, covering areas such as genetics, bioinformatics, medical imaging, and healthcare informatics. , the program aims to prepare students to innovate and improve diagnostic tools, treatment strategies, and healthcare .

The curriculum is designed to foster technical proficiency in AI and understanding of their practical applications in solving complex medical problems. By the completion of the

program, graduates are well-equipped with the knowledge and skills necessary to lead the development of AI-driven solutions in healthcare field.

Overview

In the Industrial Revolution 4.0, in which self-driving cars, assistive robots, and many automatic systems have become a product of the artificial intelligence revolution, which will change the way we live and work, artificial intelligence professions are classified as professions of the future. The B.Sc. program in Artificial Intelligence provides students with the basic principles of artificial intelligence to enable them to critically evaluate theories, techniques, tools and systems used in interdisciplinary application areas. The student will gain an understanding and practical application of data analysis technology and a range of machine learning models for model building and develop transferable computational and statistical skills for model evaluation. In addition, students will learn about the core components of artificial intelligence systems such as natural language processing, computer vision and robotics, and students will also develop key employability skills such as teamwork, report writing and communication skills.

Overview

As modern financial sciences increasingly turn to big data in order to improve financial and investment decisions. There is a growing demand for academicians and professionals with specialization in data science. This major equips you with data analytics skills which are in short supply and can be utilized in artificial intelligence applications and machine learning. Thus, data science is being used for many finance areas such as; customer data management, financial fraud detection, risk analytics, and algorithmic trading.

Big data streams influence financial and statistical modeling daily on ever increasing scale. It's not just financial data that impacts investment decisions, even data streams from social networks and search engine analytics can change how an investment matures. Therefore, financial and investment industry needs practitioners who have fundamental understanding of financial markets who can apply statistical modeling in context of the growing and increasingly complex, data available to financial firms.

Overview

Financial engineering is the use of mathematical techniques to solve financial problems. Financial engineering uses tools and knowledge from the fields of computer science, statistics, economics, and applied mathematics to address current financial issues as well as to devise new and innovative financial products.

Moreover, Financial engineering is sometimes referred to as quantitative analysis and is used by regular commercial banks, investment banks, insurance agencies, and hedge funds.

Furthermore, the financial industry is always coming up with new and innovative investment tools and products for investors and companies. Most of the products have been developed through techniques in the field of financial engineering. Using mathematical modeling and computer engineering, financial engineers are able to test and issue new tools such as new methods of investment analysis, new debt offerings, new investments, new trading strategies, new financial models, etc.

Therefore, the program of Financial engineer designed to equip the student with need skills to enrich the Palestinian market with this new filed.
