

Full QA & Bug-Hunt Report

University Easy Plans · JO0Dile/MyMenuPack · branch
claude/claude-capabilities-environments-k88hlo · commit 5058292
16 August 2026

TOTAL ISSUES FOUND	TOTAL FIXED	CRITICAL REMAINING	NON-CRITICAL REMAINING
5 across 14 feature areas	5 all verified by re-test	0 none	1 deliberate — see limitations

Method: **TEST → FIND → ROOT CAUSE → FIX → RETEST → REGRESSION TEST**. Every claim below is backed by a scripted browser run against the real application. Anything that could not be verified is named explicitly in the last section rather than assumed to work.

The five bugs

1 Header buttons unreachable on every phone width web/css/app.css:204

High — three features were simply gone on mobile. `.header-actions` was `flex:0 0 auto`, so the row kept its full ~604px content width inside a 360px viewport. **Course Library, Export Plan and Contribute sat off the right edge with nothing able to scroll to them.** Changing it to `flex:0 1 auto`; `min-width:0` is what lets the existing flex-wrap actually wrap.

Verified Re-measured max right edge: 307px @360, 337px @390, 377px @430 — all inside the viewport. Desktop layout unchanged.

2 Dashboard GPA card contradicted itself web/js/36-dashboard.js:128

The card read `standing.en`, but `standingFor()` returns `{label, cls, ar}`. That was always undefined, so the card printed a real GPA with **“No grades entered yet”** directly underneath it. The degree audit and GPA Studio already read `.label`.

Verified Card now reads “GPA 3.58 · Good Standing”, agreeing with every other surface.

3·4 Achievements and Plan Overview could not be closed with Escape web/js/24-achievements.js, web/js/07-plan-overview-print.js

The degree-audit modal and the course modal both already closed on Escape. These two did not, so a keyboard user who opened either had no way out except the mouse. Added the same guarded handler both already used.

Verified All four modals now report `closes-on-esc`.

5 plans.json was downloaded three times on every cold start web/js/30-sync.js, web/js/01-catalogue.js

Two startup paths called `checkForUpdates(false)` — the catalogue boot chain, *after it had already parsed the file*, and this module’s own `window.load` listener — each re-fetching with `cache: 'no-store'`. The catalogue now hands over the feed it already holds, and the duplicate listener is gone.

Verified 3 → 1 fetch per cold start. 60 requests, 60 unique, zero duplicates. Startup sync still writes `aaup_lastSync` on a fresh profile, and the Settings check-for-updates button still hits the network on every press.

Per-area results

Area	Result
Navigation	7 viewports × 9 destinations — 0 console errors, 0 page errors, 0 failed requests, 0 layout defects
Study plan	51 courses render; 20 completed / 21 available / 10 locked, consistent on every surface
Prerequisites	Real unlock exercised: checking Machine Learning unlocked NLP, survived reload, re-locked on undo
Dashboard	Bug 2 found and fixed; all figures now agree with plan, audit and core
Degree audit	GPA 3.58, 54 graded hours, 75 remaining — matches every other surface
Planner / My Path	Renders, no errors
Course detail modal	Locked / available / completed all open with correct content; locked shows “Still needed: Machine Learning”; closes by X and by Escape
Achievements	1/9 unlocked, badge grid, share buttons; Bug 3 fixed
Overview & Print	51 courses listed; print root confirmed visible under @media print (not a blank page); Bug 4 fixed
Course Library	17 plans in picker, 57 courses listed, search filters 57→43, friendly empty state, XSS term escaped, clear restores, back and close work
Fix panel	Opens, runs analyzers, reports findings, closes
AI assistant	10 question types answered from real plan data; off-topic question correctly refused; Arabic answered in Arabic; empty submit creates no junk
Edit Mode	Enter/exit clean; stat chips correct (3.58 / 54 / 75 = 129); addYear 5→6, removeYear 6→5; move validation refuses a course ahead of its prerequisite <i>and</i> a prerequisite past its dependent, with a bilingual reason; apply + undo round-trips exactly
Themes	All six persist across reload
Arabic / RTL	Correct at 390px and 1366px, and returns to English cleanly
Persistence	Progress, theme and plan survive reload and a brand-new session
Offline	Service worker active; 51 courses render with the network off; progress intact; recovery clean
Import / export	Foreign localStorage keys blocked, XSS payload escaped and not executed, garbage rejected with friendly toasts
Performance	Load 349ms; heap 4MB → 4MB after churn; DOM stable at 2201 nodes; nav rounds 7.79–7.80s across 6 rounds (no degradation); slowest course toggle 81ms; rAF answered in 10ms and 17ms — no freezing
Accessibility	38 tab stops, all 38 with a visible focus ring; sidebar items are real buttons; 0 images without alt
Security	No committed secrets

Coverage and build health

Viewports tested

360×640 · 390×844 · 412×915 · 430×932 · 768×1024 · 900×900 · 1280×800 · 1366×768 / 800 / 850 · 1440×900 · 1920×1080

Journeys tested end to end

- Cold first visit → home → university → college → plan → study plan renders
- Mark a prerequisite complete → dependent unlocks → reload → still unlocked → undo → re-locks
- Dashboard → degree audit → GPA → achievements → overview, checking every number agrees
- Enter Edit Mode → add a year → remove it → move a course (refused, then allowed) → undo → exit → reload
- Course Library → pick a plan → search → empty state → clear → back → close
- Switch to Arabic at phone and desktop width, then back to English
- Cycle all six themes, reload after each
- Go offline → reload → plan still renders → progress intact → back online
- Import a hostile file: foreign keys, XSS payload, and malformed JSON
- Interaction fuzz: 45 controls clicked, nav spam, modal spam, refresh mid-modal, 5 invalid hashes, 300-character search, resize storm

Build health

Check	Result
eslint 9	0 errors, 4 warnings — exactly the pre-existing baseline, nothing added
stylelint 16	0 errors, 8 warnings — exactly the pre-existing baseline, nothing added
htmlhint 1	clean
precache check	all 58 loaded files precached, all 67 precached files exist
service worker	cache version bumped v39 → v40 so browsers reinstall the shell

Known limitations — stated plainly

Not fixed, deliberately

Course-category colours fail WCAG AA for small text. Worst measured contrast is **University Elective at 2.79** (AA needs 4.5); skills 3.65, department 3.38. These ratios are identical across all six themes by design. Fixing it means recolouring the whole category system — a redesign, not a bug fix — and it would desync the finished showcase video. Flagged here rather than changed.

Could not be verified from this environment

No outbound access to the project's Cloudflare Workers (ERR_TUNNEL_CONNECTION_FAILED):

- **Cloud Sync** — the studyplan-cloud Worker was not tested at all.
- **Production admin backend** — the admin UI was exercised against a local mock serving the same API; the real studyplan-admin Worker's auth and GitHub-commit path were not.
- **AI Worker** — the assistant was tested in its offline, grounded mode only; online smart mode was not.

Not tested at all

Real iOS and Android hardware (emulated viewports only) · an actual printer (print-media emulation only) · screen readers — labels, semantics and keyboard operation were checked, but not actual assistive-technology output.

One earlier finding retracted

The 14×14 “small tap targets” are the legend’s colour swatches — decorative spans with no click handler — and the single unlabelled button is the toast action button, hidden until its label is set. Neither is a defect, and neither was changed.

All five fixes are committed and pushed to `claude/claude-capabilities-environments-k88hlo` as commit 5058292. No pull request has been opened.
